                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amino acid sequences of the heavy chain (AAW11917) and light chain (AAW11918) of anti-human interleukin-1 beta (IL-1 beta) murtine monocional antibody (MAD) St48-E26 were deduced form nucleic acids (AAT51436-37) derived from hybridoma St48-E26. The heavy and light chains, esp. the complementarity determining region sequences, can be utilised in novel recombinant chimeric and humanised antibodies (see also AAW11919-20) useful for the treatment and prevention of IL-1 mediated inflammatory disorders.

This sequence represents the light chain of BotFab 5,

a murine recombinant antibody fragment (rFab) specific to

a murine recombinant antibody fragment (rFab) specific to

botulinum toxin types A and B. A cDNA library was made from mouse mRNA

solated from mice immunised with human pentavalent toxoid. The cloned

mouse heavy and light chains were expressed in phage display libraries

and screened for their ability to bind to botulinum toxin types A or B.

The clones were then isolated and sequenced. Botulinum neurotoxin is

produced as several antigenically distinct serotypes (A-G) and is

non-covalently associated with non-neurotoxic proteins. The rFab of

this invention binds to the non-neurotoxic proteins that are found in

neurotoxin complexes A and B. Such antibody fragments are able to

act as immunosensors for detecting botulinum toxins in food and

are less expensive to produce than monoclonal antibodies as they can be

isolated from large scale bacterial cultures. Also, the affinity of an

ireth may be altered by mutagenesis of its gene and subsequent screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a murine recombinant antibody fragment (Frab) specific to
botulinum toxin types A and B. A cDNA library was made from mouse mRNA
isolated from mice immunised with human pentavalent toxoid. The cloned
mouse heavy and light chains were expressed in phage display libraries
and screened for their ability to bind to botulinum toxin types A or B.
The clones were then isolated and sequenced. Botulinum neurotoxin is
produced as several antigenically distinct scrotypes (A-G) and is
non-covalently associated with non-neurotoxic proteins. The Frab of
this invention binds to the non-neurotoxic proteins that are found in
neurotoxin complexes A and B. Such antibody fragments are able to
act as immunosensors for detecting botulinum toxins in food and
are less expensive to produce than monoclonal antibodies as they can be
isolated from large scale bacterial cultures. Also, the affinity of an
in any be altered by mutagenesis of its gene and subsequent screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     65 QLLVYSAKTLADGVPSRFSGSGTQYSLKINSLQPEDFGSYYCQHFWSTPYTFGGGTKL 124

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            125 EIKRADAAPTVSIFPPSSEQLTSGGASVVCFLNNFYPKDINVKWKIDGSERQNGVLNSWT 184
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                produced as several antigenically distinct serotypes (A-G) and is non-covalently associated with non-neurotoxic proteins. The rFab of this invention binds to the non-neurotoxic proteins that are found in neurotoxin complexes A and B. Such antibody fragments are able to act as immunosensors for detecting botulinum toxins in food and are also useful in health care and in military applications. They are less expensive to produce than monoclonal antibodies as they can be isolated from large scale bacterial cultures. Also, the affinity of an rFab may be altered by mutagenesis of its gene and subsequent screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TOVLALLLLWLTGARCDIOMTOSPASLSASVGETVTITCRASGNIONYLAWYQOTOGKSP 64

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the light chain of BotFab 22, a murine recombinant antibody fragment (Frab) specific to botulinum toxin types A and B. A GNA library was made from mouse mRNA isolated from mice Immunised with human pertavalent toxoid. The cloned mouse heavy and light chains were expressed in phage display libraries and screened for their ability to bind to botulinum toxin types A or B. The clones were then isolated and sequenced. Botulinum neurotoxin is
                                                                           Murine anti-botulinum toxin antibody fragment (BotFab 22) light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Gaps

```
recombinant, intracellularly expressed anti-protein antibodies (or fragments). The protein function to be inhibited is preferably p21(ras). It is especially inhibited by the monoclonal antibody Y13.259. This sequence represents the light chain of the Y13.259 antibody. The method may be used to inhibit the activity of specific proteins in cells and eliminate undesirable biological responses, e.g. it may be used to treat conditions associated with the over-expression or overactivity of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 GKSPQLLVYSAKTLADGVPSRFSGSGSGTQYSLKINSLQPEDFGSYYCQHFWSTPYTFGG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               are also useful in health care and in military applications. They are less expensive to produce than monoclonal antibodies as they can be isolated from large scale bacterial cultures. Also, the affinity of an rFab may be altered by mutagenesis of its gene and subsequent screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mouse heavy and light chains were expressed in phage display libraries and screened for their ability to bind to botulinum toxin types A or B. The clones were then isolated and sequenced. Botulinum.neurotoxin is produced as several antigenically distinct serotypes (A-G) and is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the light chain of BotFab 1, a murine recombinant antibody fragment (rFab) specific to botulinum toxin types A and B. A cDNA library was made from mouse mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   isolated from mice immunised with human pentavalent toxoid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        non-covalently associated with non-neurotoxic proteins. The reab of this invention binds to the non-neurotoxic proteins that are found in neurotoxin complexes A and B. Such antibody fragments are able to act as immunosensors for detecting botulinum toxins in food and
                                                                                                                                                                                                                                                                                                                                     Murine anti-botulinum toxin antibody fragment (BotFab 1) light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

permit targetting of viral and bacterial vectors to cells that express targetted receptors. Diseases that can be targetted include cancers, vascular disorders, diabetic retinopathies, restenosis, ophthalmic disorders, hyperproliferative disorders, and hormonal disorders. The present sequence is human penton base monoclonal antibody, DAV-1

light chain.

The bifunctional molecules are useful for gene therapy, for promoting Adenoviral (Ad) vector-mediated gene delivery to cells lacking av integrins, for enhancing Ad binding and internalisation, and in gene delivery of by fibreless adenovirus particles. The bifunctional molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; bifunctional molecule; monoclonal antibody; gene therapy; cancer; vascular disorder; diabetic retinopathy; restenosis; ophthalmic disorder; hyperproliferative disorder; hormonal disorder; DAV-1 light chain;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              17-JAN-2002.
```

```
The present sequence represents the variable region of the light chain of antibody 3G2, produced by the hybridoma ZAA3G2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               acid esters enantioselectively. Preferably the esters are 4-nitro-
benzyl esters and the esterified amino acids are amino-protected.
Also disclosed are new hybridomas expressing the catalytic antibodies,
especially ZAA7G12 (FERM BP-4947) and ZAA3G2 (FERM BP-4946). The
antibodies are raised in mice using the compound p-nitrobenzyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           They are used for efficient resolution of racemic amino acids with high optical selectivity, giving optically active amino acids useful for the production of optically active drugs and chiral separation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The patent discloses new catalytic antibodies which hydrolyse amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4-carboxy-1-(benzyloxycarbonylamino)-butyl]phosphonate as hapten.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Catalytic antibody for enantioselective hydrolysis of amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       74.9%; Score 924; DB 17; Length 216;

They are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Hashimoto's disease, graft versus host disease, Sjogren syndrome, pernicious anaemia, Addison's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   scleroderma, Goodpasture syndrome, Crohn's disease, rheumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                               New antibodies and proteins bind conserved epitope of Fas antigen used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         These
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the amino acid of the light chain of murine anti-human Fas monoclonal antibody HFE7A. cDNA (see AAV70130) encoding the light chain was obtained from HFE7A-secreting hybridoma (FERM BP-5828) RNA by RT-PCR (see AAV70127-28). The invention provides humanised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RNA by RT-PCR (see AAV820127-28). The invention provides humanised HFE7A antibodies (see AAV83031-37) produced by CDR grafting. There antibodies are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 74.4%; Score 918; DB 19; Length 238; Best Local Similarity 72.3%; Pred, No. 6.7e-51; Matches 172; Conservative 28; Mismatches 34; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (complementarity determining regions) to antibody HFETA. Wa its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases,

This invention describes a novel humanized anti-Fas antibody-like
molecule (1) that, induces apoptosis in cells with an abnormal Fas/Fas
ligand system, by landing to Fas on the cell surface, and prevents
capoptosis in cells with a normal system, by inhibiting binding between
Fas and its ligand. The products of the invention have anti-inflammatory,
anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral,
immunomodulatory, dermatological, immunosupressive, thyromimetic,
antirheumatic, nephrotropic, antihinfertility, neuroprotective,
antiarteriosclerotic, cardiant and hepatropic activity. (I) induce
antiarteriosclerotic, randiant and hepatropic activity. (I) induce
capoptosis by binding to cell surface Fas or inhibit it by competitive
inhibition of ligand binding. (I) are used to treat and/or prevent
diseases associated with the Fas/Fas ligand system, especially systemic
lupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft
versus host disease, Sjorgen's syndrome, pernicious or hypoplastic
anemia, Addison's disease, scleroderma, Goodpasture syndrome, crohn's
disease, autoimmune hemolytic anemia, sterility, mysatheria gravis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a murine anti-Fas monoclonal antibody HFE7A light chain described in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         in a cell expressing Fas. The agent has immunosuppressive and antiallerigic activity and is used for preventing and treating autoimmune diseases, allergy, atopy and others. The present sequence is that of a peptide, useful to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a preventive or treating agent for diseases caused by abnormality in Fas/Fas ligand system containing as the active component an antibody having as the light chain subunit a polypeptide containing residues 1.218 of one of 3, 239 residue amino acid sequences, or residues 1-451 of one of 3, 470 residue amino acid sequences, fully defined in the specification and having an activity of combining specifically with mammalian Fas and an activity of inducing apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MSVLTQVLALLLLMLTGARCDIQMTQSPASLSASVGETVTITCRASGNI----QNYLAWY 56

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              117 TFGGGTKLEIKRADAAPTVSIFPP$SEQLTSGGASVVCFLNNFYPKDINVKWKIDGSERQ 176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a preventive or treating agent for diseases caused by abnormality in the Fas/Fas ligand system containing, as the active component, an antibody having a light chain subunit and a heavy chain subunit and an activity of combining specifically with mammalian Fas and an activity of inducing apoptosis in a cell expressing Fas. The agent has antialiargic, immunosuppressive and apoptotic activity and is used for preventing and treating autoimmune diseases, allergy, atopy and others. The present sequence is that of a peptide useful to the
